

Munkbro detecting permission report

Munkbrovej 8, 7500 Holstebro · 9 October 2026 · Mark

Summary

This permission sits on a very old crossing of the Vegen Å valley south of Holstebro. The 1842-99 map marks the bridge as 'Munkbro', the monks' bridge, and the old road to Felling church runs through your land on both sides of it. Around it lies one of the densest prehistoric landscapes in this area: 50 recorded sites within about 1 km. It is a good permission. Expect medieval and later road losses near the bridge and plenty of Stone Age flint; Bronze and Iron Age metal is a real chance.

- **Start at the bridge.** The west tip of 1a and the east tip of the western parcel meet at the river crossing, where the old road and the bridge-keeper's house ('Brohus') stood.
- **Then follow the old road** east through 1a to Munkbro Gård and south-west along the western parcel.
- **Prehistoric remains are on and around your land.** A ploughed-out burial mound and a flint scatter are recorded inside the western parcel, another flint scatter inside 1a, and two damaged mounds lie 28 to 56 m outside the eastern parcel.
- **Protected mounds are near but not on your land.** Three lie 160 to 190 m away. Keep the 2 m rule in mind if you walk past them.
- **One thing to confirm:** that all four outlined areas, 1a plus the three lighter-orange parcels, are in the permission.

Positions are worked from the register's coordinates and your screenshot, and are good to about 15 to 25 m.

The permission

The permission is the land of Munkbrovej 8, 7500 Holstebro: matrikel 1a plus three lighter-orange parcels shown in your app. Together they come to roughly 80 ha.

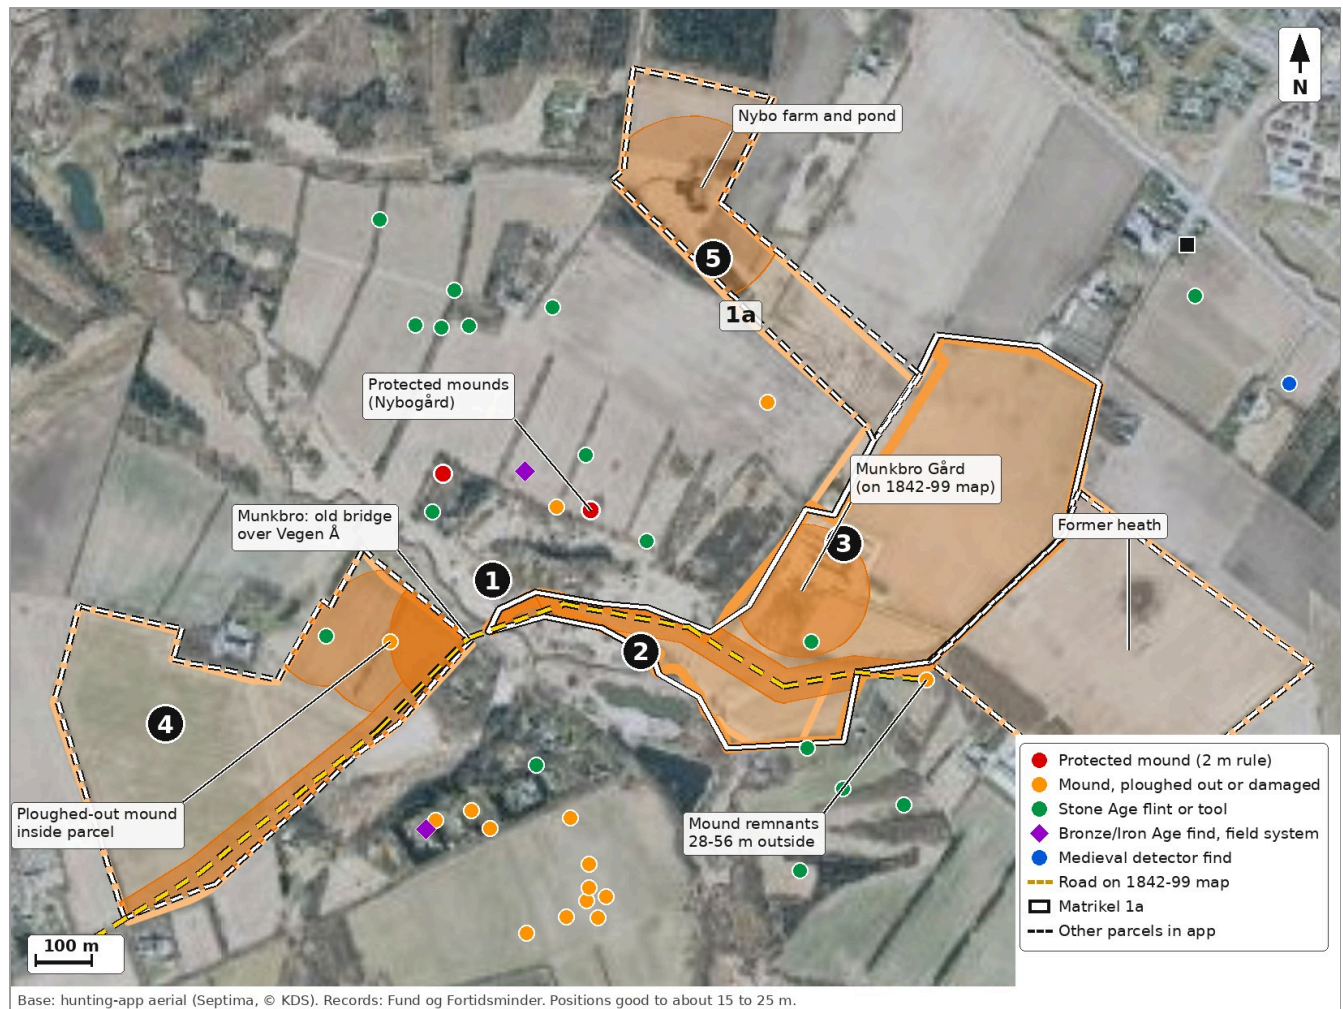

Area	Size	Description
Matrikel 1a	27.3 ha registered	The farm and its fields, from the river crossing in the west to the farmyard and the field north-east of it
Western parcel	about 24 ha measured	South-west of the river, between Stavshede and the old road to Felling church
Northern strip	about 11 ha measured	Narrow strip running north-west to Nybo farm and its pond
Eastern parcel	about 19 ha measured	Field south-east of 1a, former heath on the 1842-99 map

- **Address:** Munkbrovej 8, 7500 Holstebro. Ejlerlav Munkbro, Tvis; Mejdal-Halgård parish, Holstebro Kommune.
- **Responsible museum:** De Kulturhistoriske Museer i Holstebro Kommune.
- **Farm:** the farmhouse dates from 1923, extended in 1987. 'Munkbro Gård' stands on the same site on the 1842-99 map.
- **Height:** the farmhouse is at 36.9 m. The ground falls to the river meadows of Vegen Å, which cuts through the middle of the permission.
- **Land use:** mostly arable. The river valley between the parcels is meadow and scrub.

- **Assumption:** I have treated all four outlined areas as part of the permission. Sizes other than 1a are measured from my tracing; my tracing of 1a comes to 29.1 ha against 27.3 ha registered.

Map

The numbered areas run from the first place to search (1) to the last (5); the reasons are in Areas of interest below. The solid white line is matrikel 1a; dashed lines are the other parcels in your app; the yellow line is the road on the 1842-99 map.

Map 1. Areas of interest, numbered in search order, with the old road and recorded sites.

History of the area

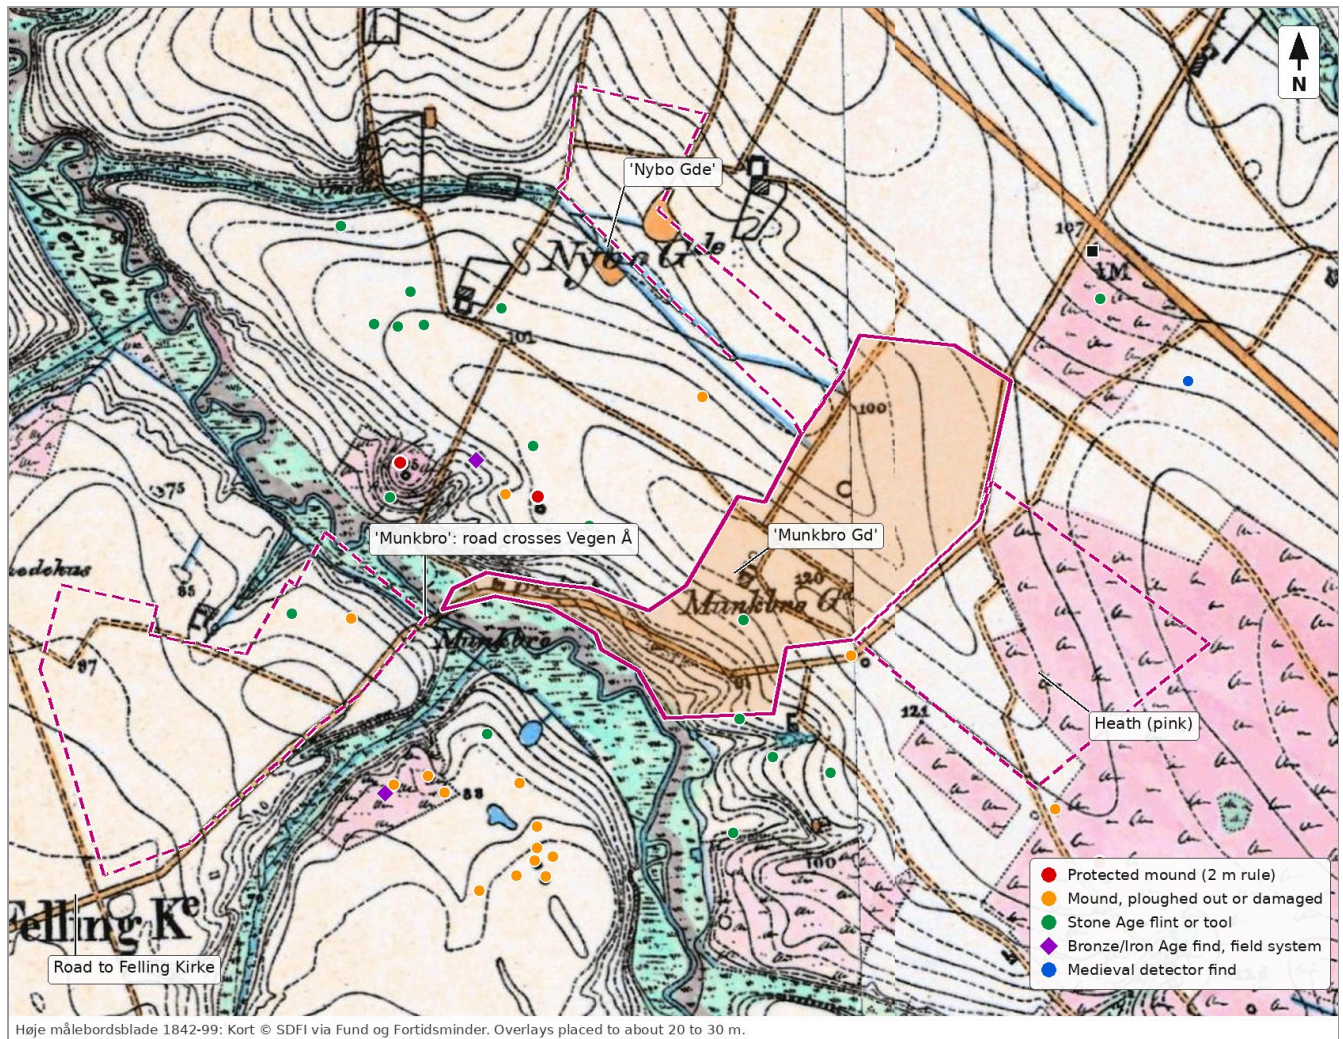

People have used the slopes above Vegen Å for at least 5,000 years, and the river crossing at Munkbro has probably been a route for much of that time.

- **Stone Age.** In the 1940s a collector, Overgaard, recorded dozens of flint sites on the fields here. The National Museum registered flint daggers, lance-heads, sickles and axes of about 2350 to 1700 BC from Nybogård, 240 m north of your northern strip, and flint scatters inside 1a and the western parcel.
- **Burial mounds.** Round mounds line the ridges on both sides of the valley. Three are protected; around 20 more are ploughed out or damaged and were noted in 1895, 1902 or on air photos.
- **Bronze and Iron Age.** A miniature bronze dagger of 1700 to 1100 BC came from Nybogård, about 220 m from 1a. An Iron Age field system (500 BC to AD 0) shows on 1954 air photos 180 m south of the western parcel, and a pit of the Late Bronze Age to Iron Age was excavated at Halgård in 1989.

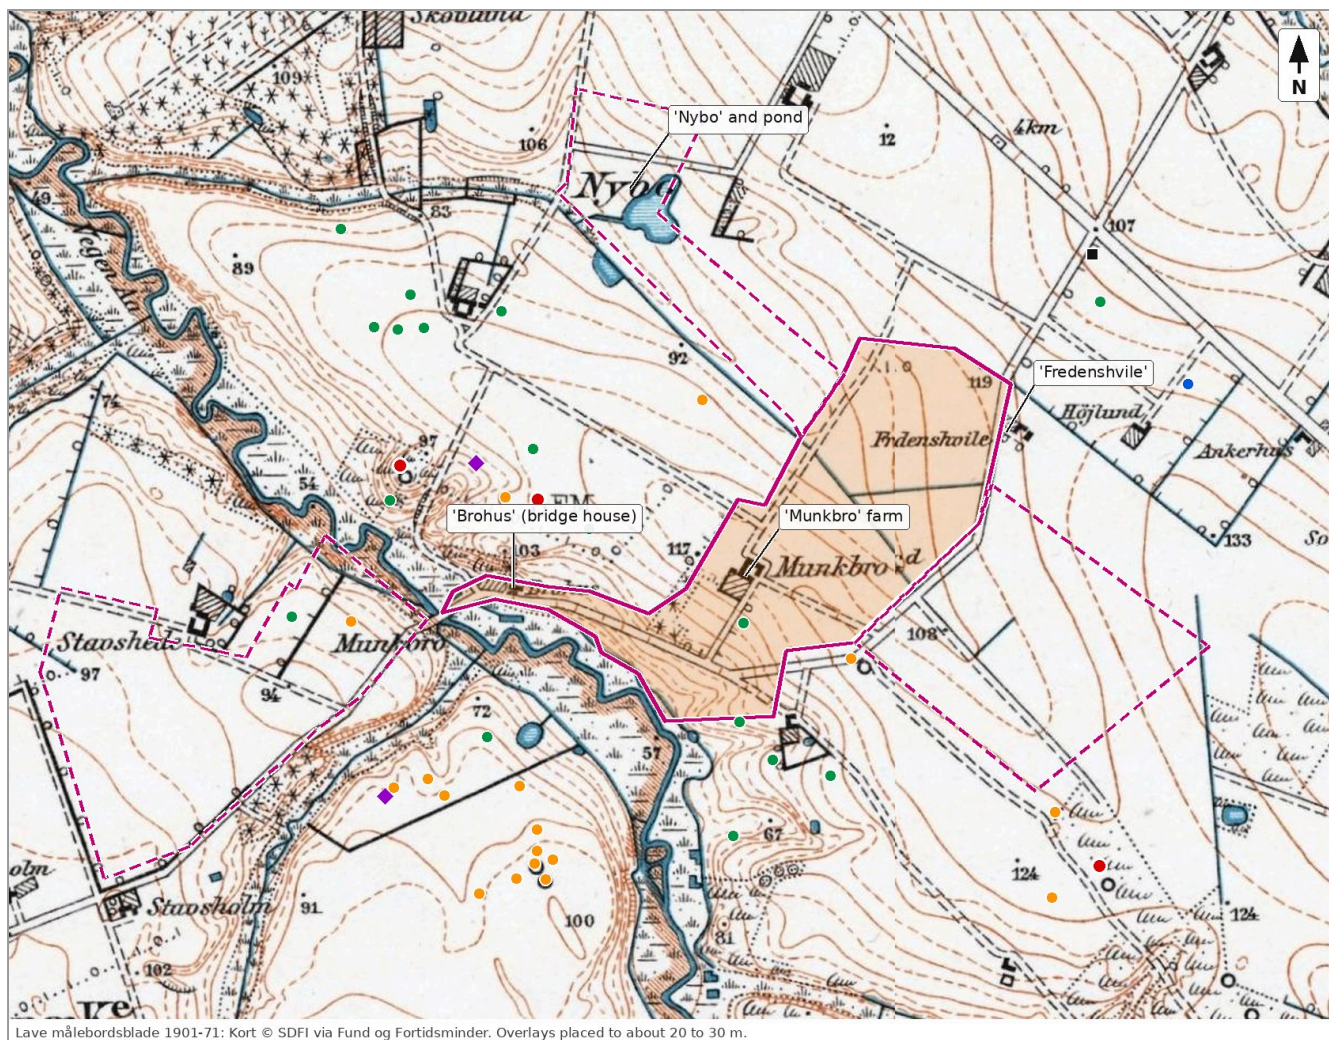

- **Munkbro.** The name means 'monks' bridge'. [Tvis Abbey](#), a Cistercian house founded in 1163, lay a few kilometres to the south-west and held land around Holstebro until the Reformation, probably 1547. That the bridge was named after its monks is likely but not confirmed by a source I have found.
- **The road.** On the 1842-99 map the road from Felling church crosses the river at Munkbro and runs east past Munkbro Gård. The 1901-71 map shows a 'Brohus' (bridge house) at the crossing.
- **Medieval finds nearby.** A detectorist found an Agnus Dei brooch and a bronze weight in 2012, about 340 m north-east of 1a.

What the old maps show

Both maps show the same road, bridge and farm as today, with the eastern parcel still heath in the 1800s.

Map 2. The 1842-99 map (høje målebordsblade) with the parcels and recorded sites.

Map 3. The 1901-71 map (lave målebordsblade) with the parcels.

- **The crossing.** The 1842-99 map labels the crossing 'Munkbro' where the road bridges Vegen Å at the west tip of 1a. By 1901-71 a 'Brohus' stands beside it.
- **The road.** It runs from Felling church north-east along the south-east edge of the western parcel, crosses the river, then runs east through 1a past the farm. It is the line of today's Munkbrovej.
- **Munkbro Gård.** The farm stands inside 1a on both maps, on the same site as now.
- **Nybo.** The northern strip reaches Nybo Gård and a pond, both on both maps.
- **Heath.** The 1842-99 map colours the eastern parcel and the land south of it pink with heather symbols: uncultivated heath, so few finds there before it was ploughed.
- **Meadow.** The valley floor is green meadow on the 1842-99 map: wet ground, not good for detecting.

Recorded archaeology

Fund og Fortidsminder lists 50 sites in a 1.9 by 1.3 km box around the farm. Three are protected mounds; none of those is on your land. The ones that matter most:

Record	What it is	Date given	Distance
180804-293	Ploughed-out burial mound, seen on 1965 air photos	3950-1101 BC	Inside the western parcel
180804-192	Flint: core, blades, a microblade and flakes	Stone Age	Inside the western parcel

Record	What it is	Date given	Distance
180319-300	Flint scatter over a fairly large area (Overgaard site 315)	Stone Age	Inside 1a, near the farm
180319-305	Stone club-head with two cup marks	3950-1701 BC	7 m from 1a
180319-22	Damaged mound, 1.1 by 16 m in 1895, dug into from two sides	Prehistoric	28 m from the eastern parcel
180319-23	Ploughed-over mound, 1.1 by 18 m in 1895, foot cut by a road	Prehistoric	56 m from the eastern parcel
180319-301	Flint scatter on a limited area (Overgaard site 350)	Stone Age	83 m from 1a
180319-518	Mound, seen on air photos	Prehistoric	92 m from the northern strip
180319-20	Protected mound, 2.6 by 22 m	Prehistoric	161 m from 1a
180319-24	Protected mound, 1.6 by 19 m	Prehistoric	189 m from the eastern parcel
180319-18	Protected mound, 1.6 by 16 m	Prehistoric	193 m from the western parcel
180804-301	Celtic field system, seen on 1954 air photos	500 BC-AD 0	180 m from the western parcel
180319-296	Miniature bronze dagger	1700-1101 BC	217 m from 1a
180319-499	Detector finds 2012: Agnus Dei brooch and bronze weight	Medieval	340 m from 1a

The other 36 are more Stone Age flint finds, many around Nybogård and Højlund, about 15 ploughed-out mounds south of the river, and the Halgård pit.

- **The ploughed-out mound in the western parcel** is the one place on your land where graves may survive below the plough. Detecting the topsoil is allowed, but do not dig below it.
- **The flint scatters** inside 1a and the western parcel are the remains of Stone Age camps or houses. Walk them as well as detecting them.
- **Metal finds are scarce in the register.** Almost all records come from flint collecting and air photos, not detecting, so the area has probably been little detected.

Areas of interest

The bridge ranks first because every traveller on this road for centuries crossed the river there. Numbers match the map.

Rank	Area	Why	How to search
1	The Munkbro crossing: dry ground within about 140 m of the bridge, on both sides	Old road and bridge on both maps; 'Brohus' bridge house; travellers stopping, paying or waiting	Tight lanes on the dry slopes either side of the road; skip the wet meadow
2	The old road corridor through 1a and along the western parcel's south-east edge	Same road on both maps	Lanes along the road edge, about 30 m deep

Rank	Area	Why	How to search
3	The fields around Munkbro Gård	Farm on its present site since at least the 1800s; flint scatter recorded here	Detect, and walk for flint and pottery
4	North part of the western parcel	Ploughed-out mound and flint scatter recorded inside it	Topsoil only over the mound; walk for flint
5	Northern strip around Nybo	Old farm and pond on both maps; flint finds nearby	Lanes around the old farm site

- **The eastern parcel** was heath until the late 1800s. Sample it with wide lanes, and look closely at its north-west corner, nearest the two damaged mounds.
- **The river meadow** between the parcels is wet and the lowest priority.
- **If you find bronze**, especially near the mounds, stop and record it carefully: Bronze Age metal in this landscape may come from disturbed graves.

First 10 hours

Spend the first half at the crossing and along the road, and the rest testing the farm area and the prehistoric spots.

1. **Hours 1 to 3: area 1.** Tight lanes on the dry ground either side of the bridge, starting on the 1a side.
2. **Hours 3 to 5: area 2.** Follow the road east through 1a, then south-west along the western parcel.
3. **Hours 5 to 7: area 3.** The fields around the farm; walk the flint scatter.
4. **Hours 7 to 8: area 4.** The north part of the western parcel, topsoil only over the mound.
5. **Hours 8 to 9: area 5.** Around the old Nybo farm site.
6. **Hour 10:** sample the eastern parcel, or go back to whichever spot gave most.

Log every non-ferrous find with a GPS point; a cluster of medieval losses would show where the old road actually ran.

What to expect

Stone Age flint and post-medieval finds are near certain, medieval road losses are likely, and Bronze or Iron Age metal is a real chance. The figures are my judgment from the evidence above, not measured rates.

Period	Chance of a datable find	Typical finds
Post-medieval (after 1536)	Near certain	Skilling coins, buttons, buckles, horse gear
Medieval (about 1050 to 1536)	Likely near the bridge and road	Pennies, buckles, strap ends, brooches, weights
Viking Age and Late Iron Age	10 to 20%	Brooches, weights
Earlier Iron Age and Bronze Age	15 to 30%	Bronze fragments, fibulae; near mounds or the field system
Stone Age	Near certain, as surface flint	Worked flint, axe and dagger fragments

Settlement or casual loss? Road losses are single coins, buckles and horse gear spread along a line. A settlement shows as a cluster of mixed household metal with dark soil, burnt stone and pottery. A Stone Age site shows as a patch of worked flint and burnt flint with little or no metal.

Rules and reporting

Nothing on your land is protected, but three protected mounds and several damaged ones lie close by.

- **Permission.** Keep the landowner's agreement current and confirm in writing which parcels it covers.
- **Protected mounds.** Detecting is not allowed on a protected mound or within 2 m of it. The nearest are 160 to 190 m from your land.
- **Ploughed-out mounds.** Detecting the topsoil is allowed, but graves may survive below the plough. Do not dig below the plough layer.
- **Danefæ.** Finds that qualify belong to the state and must be handed in through De Kulturhistoriske Museer i Holstebro Kommune.
- **Recording.** Register finds in DIME with a GPS point and the matrikel number.
- **Stop and call the museum** if you meet burnt bone, pottery, dark pits or several bronze pieces together.

Limits and open questions

This is a desk assessment from the heritage register, the two survey maps, your screenshot and a few public sources; nothing has been checked on the ground.

- **Parcel outlines** are traced from your app screenshot and fitted to field boundaries on the register's map. They are good to about 15 to 25 m.
- **Record positions** are the register's coordinates. Flint sites from the 1940s can be tens of metres out.
- **The Tvis link** for the Munkbro name is my inference, not a sourced fact.
- **Period chances are judgments.** No metal finds from the permission itself are known to me.

Open questions:

- ☐ Confirm that all four outlined areas are in the permission, and get their matrikel numbers.
- ☐ Ask the landowner which fields are ploughed and when they are free to search.
- ☐ Ask whether anyone has detected here before; the register shows almost no detector finds.
- ☐ Ask the local archive in Holstebro about the history of Munkbro bridge and Brohus.
- ☐ Check the earliest cadastral map (about 1800 to 1820) for the road line and the farm.
