

Bilsebjerg Gård detecting permission report

Oct 8, 2026 · @Mark

Summary

This is the strongest of your three permissions by a wide margin. A Viking silver hoard and a Late Iron Age to Viking settlement were excavated about 100 m south of matrikel 5a in 2025, and medieval coins were found in 2024 on your other ground, 60 m from the farmhouse. Expect Viking and medieval material, and handle it carefully.

- **Start on the southern edge of 5a.** It is the closest ground to the Viking settlement, where the museum found a 38 m longhouse and traces of 11 more houses in 2025. Settlements of this kind often spread over several hectares.
- **Then the ground around the medieval coin finds.** Coins and a decorated belt fitting dated 1200 to 1499 were found there in 2024, north-west of the road.
- **The village edge is a third target.** The south-west corner of your land touches Ting Jellinge village, about 100 m from the church.
- **Nothing is protected on or beside your land.** But the Viking site is an active museum project, and any Viking-age find from 5a may belong to it.
- **Two things to confirm:** which parcels the lighter-orange area in your app covers, and who made the 2024 coin finds.

Positions are worked from the register's coordinates and your screenshots, and are good to about 10 to 20 m.

The permission

The permission is the land of Bilsebjerg Gård at Skælskørvej 83, 4261 Dalmose: matrikel 5a south-east of the road, plus the lighter-orange parcels north-west of it in your app. Together they come to about 32 ha.

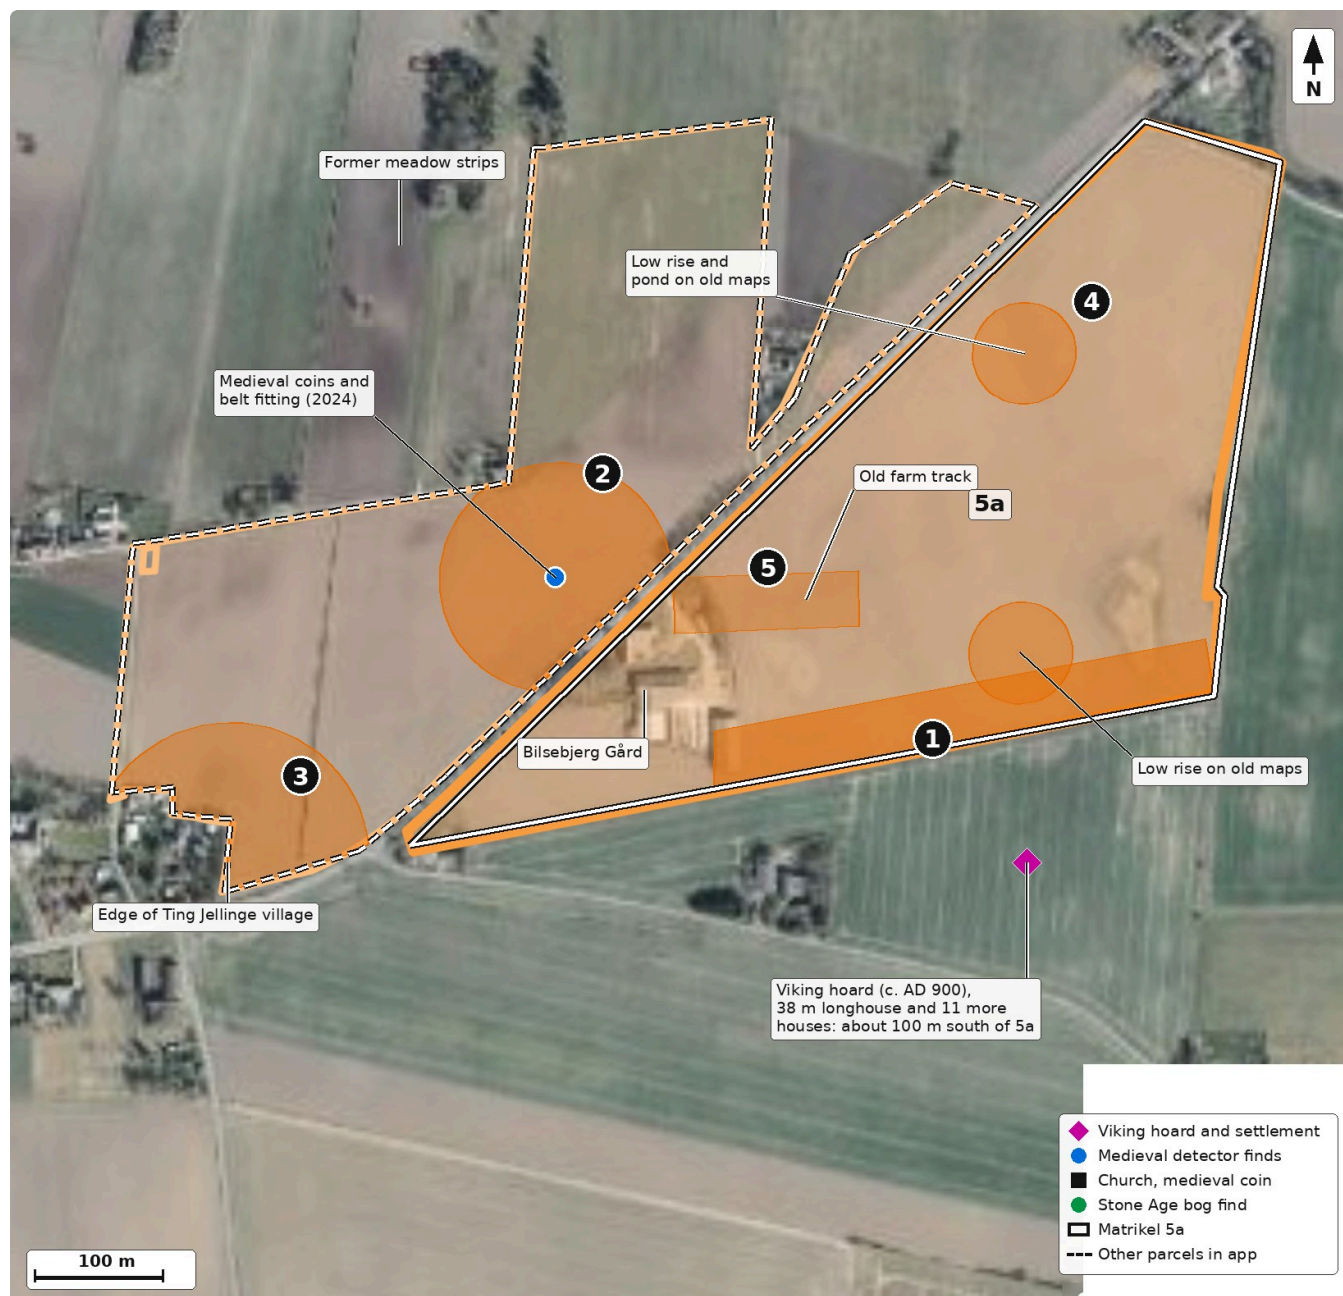

Area	Size	Description
Matrikel 5a	17.4 ha registered	Triangular field south-east of Skælskørvej, with the farmyard on its north-west side; southern edge follows an old ditch

Area	Size	Description
Lighter-orange parcels (numbers not shown)	about 15 ha measured	Fields north-west of the road, from Ting Jellinge village in the south- west to former meadow strips in the north

- **Address:** Skælskørvej 83, 4261 Dalmose. Ejlerlav Ting Jellinge By, Ting Jellinge parish, Næstved Kommune.
- **Responsible museum:** Museum Sydøstdanmark.
- **Farm:** the present farmhouse dates from 1896 in the building register. The farm stands on the same site on the 1842-99 map.
- **Height:** the farmhouse is at 37.7 m above sea level. The ground is gently rolling clay land with a few low rises.
- **Land use:** arable, ploughed. The aerial photo shows bare soil on 5a and a pale soil patch near its east end.
- **Assumption:** I have treated the lighter-orange parcels as part of the permission. My tracing of 5a gives 16.5 ha against 17.4 ha registered.

Map

The numbered areas run from the first place to search (1) to the last (5); the reasons are in Areas of interest below. The solid white line is matrikel 5a; the dashed line is the other parcels shown in your app.

History of the area

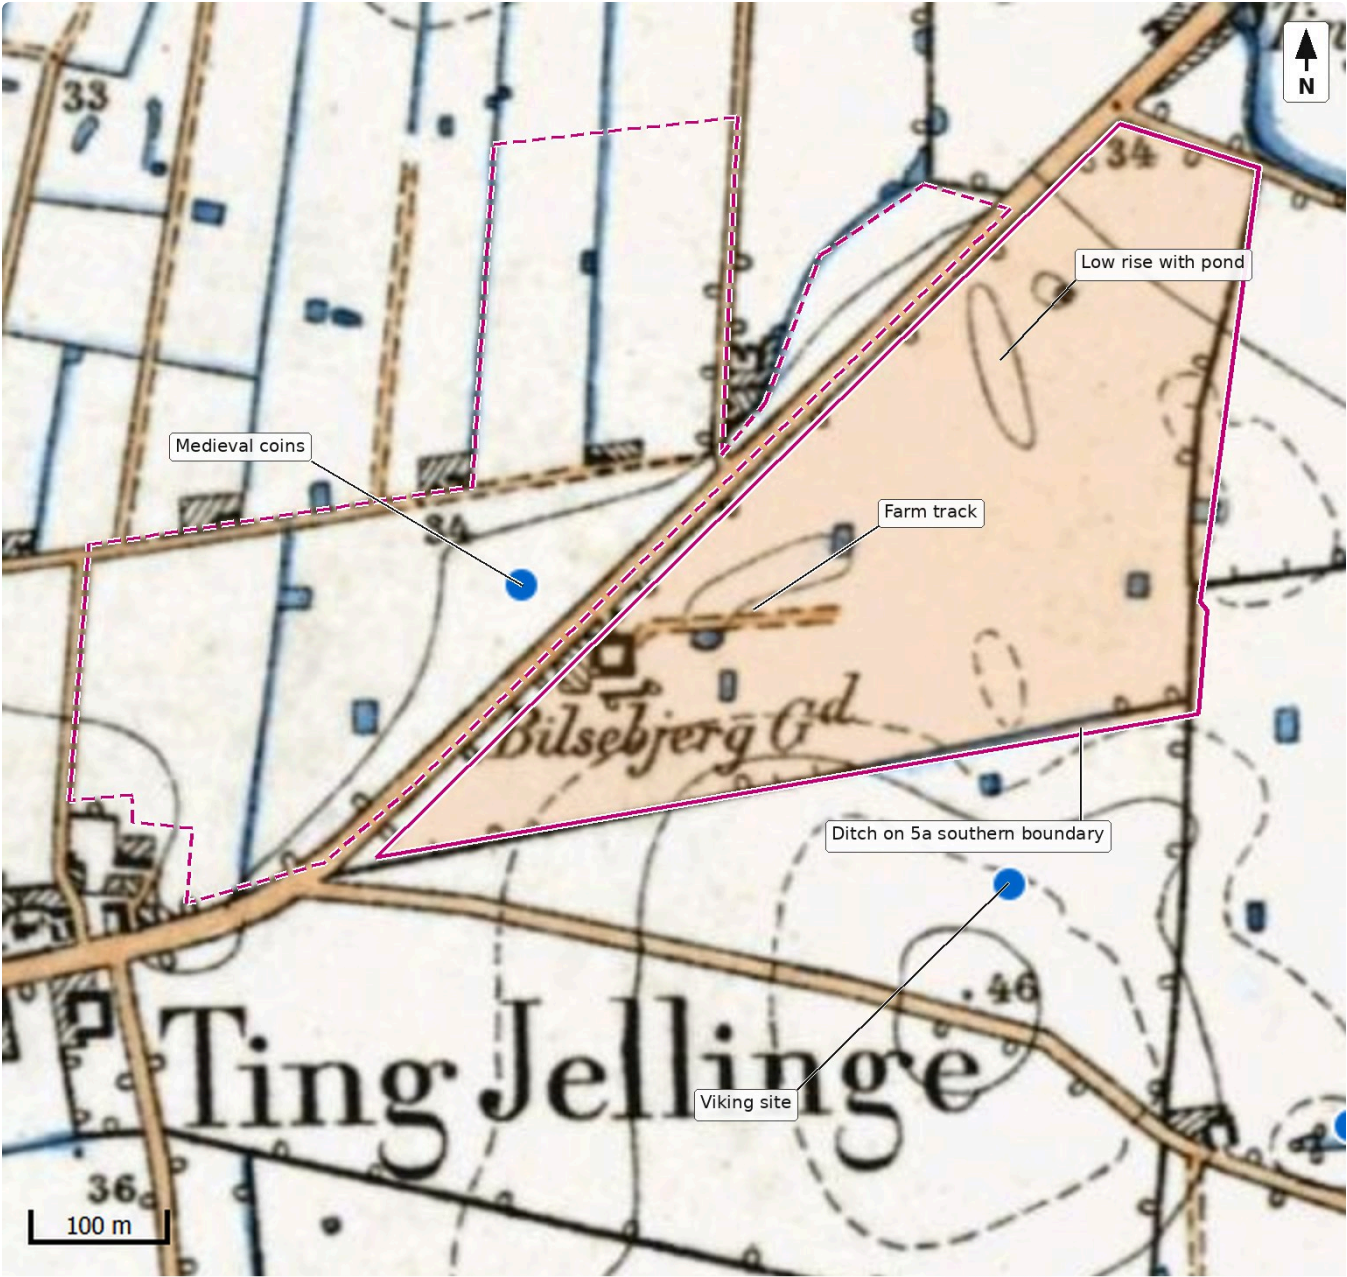

This is old, well-settled farmland in south-west Zealand, with people living close to your fields from at least the Late Iron Age through the Middle Ages.

- **Viking and Late Iron Age settlement.** The excavation 100 m south of 5a found a large curved-wall longhouse of the kind built in the Viking Age, with a silver hoard of about AD 900 buried beside it. Trenches over about 1.5 ha showed at least 11 more houses. This is a farm or small village of the centuries before the present village.

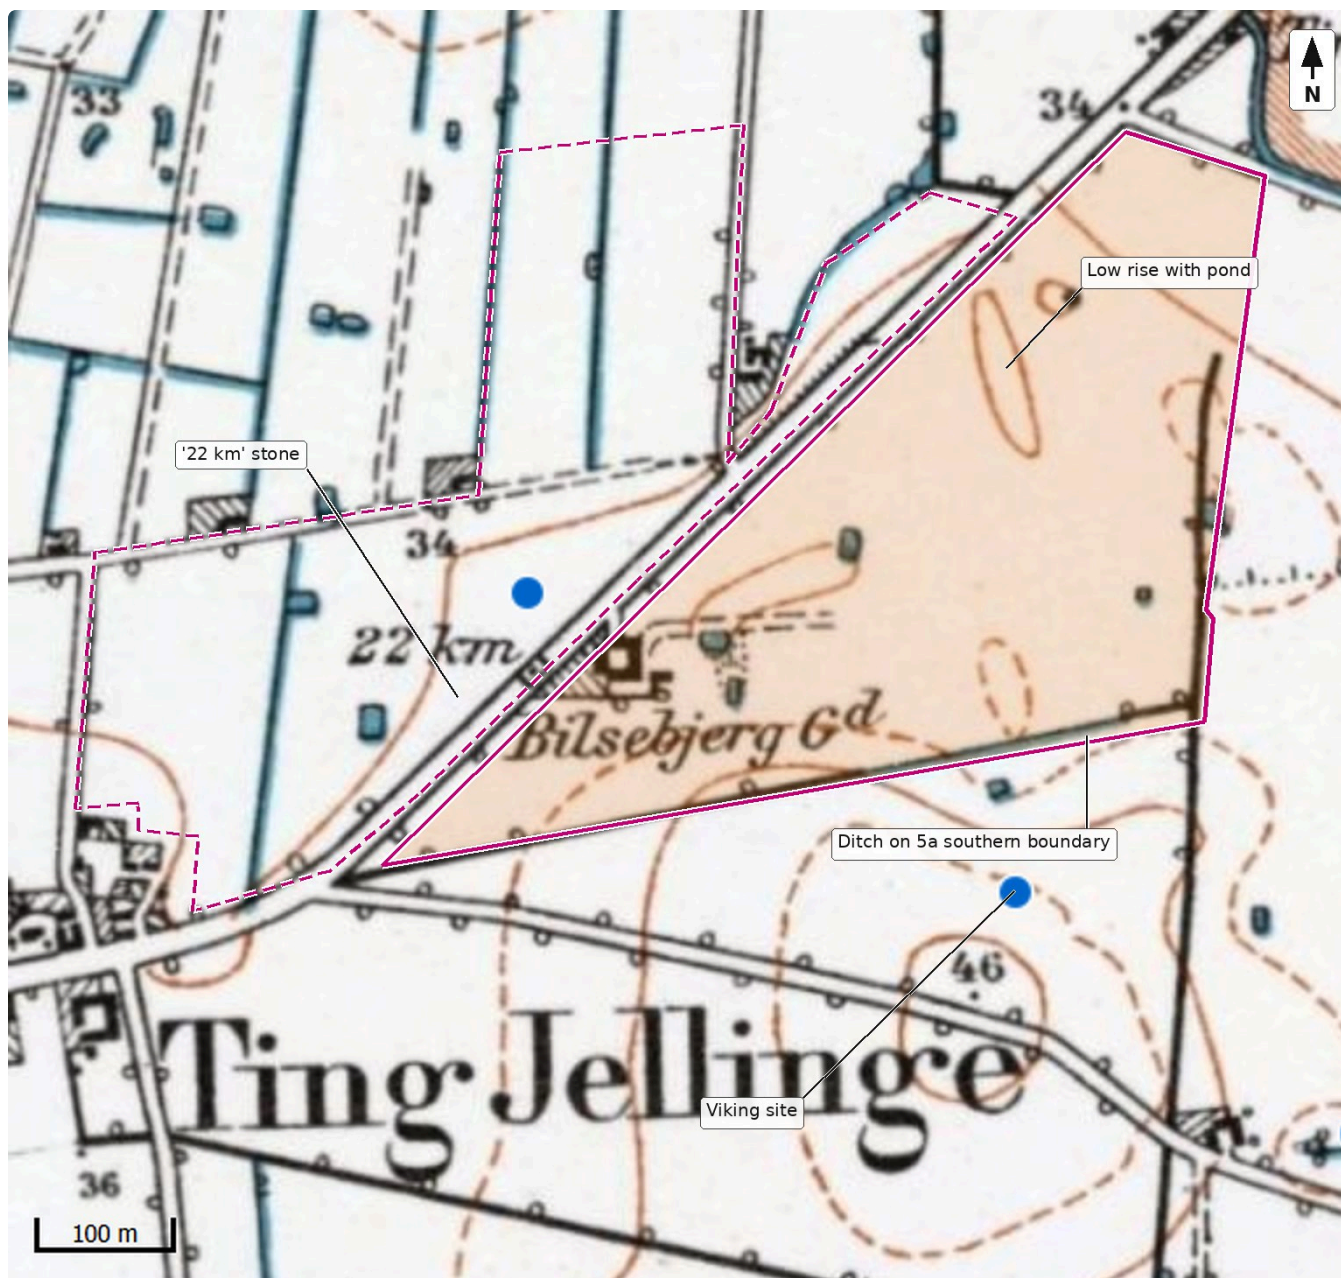

- **Ting Jellinge village and church.** The village lies just south-west of your land. Its church stands about 470 m from the farmhouse. A penny struck at Lund for Valdemar II and Archbishop Peder Saxesen (1223-28) was found in its foundations.
- **The name.** Jellinge is the same name as Jelling. The prefix 'Ting' is often said to mark a place of assembly (ting), but I have not found a source that confirms this for Ting Jellinge.
- **Bilsebjerg Gård.** The farm already stood on its present site, beside the main road, on the 1842-99 map. It was probably moved out of the village when the land was reorganised around 1800, as most farms here were; that date is general Danish history, not checked for this farm.
- **Roads.** Skælskørvej was the main road on both old maps; a '22 km' stone stood opposite the farm. A farm track ran east across 5a from the farmyard.
- **Wider area.** A settlement 1.1 km north-east has houses from the Stone Age, the Iron Age (AD 175-549) and the Middle Ages. Red-deer antler of 8000 to 5000 BC came out of a former bog 650 m south-east.

What the old maps show

Both maps fit the present fields closely: 5a's southern edge is an old ditch, the farm has not moved, and the land north-west of the road was divided into narrow meadow strips.

Høje målebordsblade 1842-99: Kort © SDFI via Fund og Fortidsminder. Overlays placed to about 15 to 25 m.

Lave målebordsblade 1901-71: Kort © SDFI via Fund og Fortidsminder. Overlays placed to about 15 to 25 m.

- **Southern ditch.** A blue ditch runs along the whole southern edge of 5a on both maps. The Viking settlement lies on rising ground just beyond it.
- **Low rises on 5a.** Both maps draw closed contours on 5a: an elongated rise with a small pond about 65 m in from the road near the north-east end, and a smaller rise about 60 m north of the southern edge. These are the natural places for buildings on this ground.
- **Small ponds.** Several small blue rectangles on 5a and around it are field ponds, probably old marl or clay pits.
- **Farm track.** A track ran east from the farmyard about 150 m into 5a.

- **Boundary at the east end.** The 1901-71 map shows a field boundary running north-south just inside the east edge of 5a.
- **Meadow strips.** North-west of the road, the northern lobe of your land lies in narrow strips divided by ditches, the 'enghaver' that give Enghavevej its name. Wet meadow is usually poor detecting ground.
- **Village edge.** The south-west corner of your land meets the houses of Ting Jellinge on both maps.

Recorded archaeology

Fund og Fortidsminder lists four sites within about 700 m, none of them protected. Two are directly relevant to your land.

Record	What it is	Date given	Distance
040417-3	Detector finds sent for danefæ assessment in 2024: coins, including a Long Cross penny, and a decorated belt fitting (journal KNV01615)	Medieval, 1200-1499	Inside your land north-west of the road, 60 m from the farmhouse
040417-4	Bakkegård, matrikel 4b and 4c: silver hoard of hack-silver and Arabic coins of about AD 900 found by a detectorist; museum excavation in 2025 found a 38 m curved-wall longhouse and 11 more houses (journal KNV01634)	Late Iron Age and Viking Age	About 100 m south of 5a
040417-1	Ting Jellinge church; a penny of Valdemar II and Peder Saxesen (1223-28) found in its foundations	Medieval	About 95 m from your village corner, 320 m from 5a
040417-2	Former bog with red-deer antler, bones and bog oak	8000-5000 BC	About 330 m south-east of 5a

Record	What it is	Date given	Distance
040510-13	Excavated settlement with houses of the Stone Age, the Iron Age (AD 175-549) and the Middle Ages	Several periods	About 1.1 km north-east

- **The Viking site.** Detector finds of Late Iron Age metalwork came from the same field both before and after the hoard was found, which is what first suggested a settlement. The hoard lay 2 m from the longhouse's north-east corner; the museum is waiting for radiocarbon dates to tie the two together. Some silver from the hoard had already been spread through the plough soil.
- **How far it reaches.** The record point is about 100 m south of 5a, and the trenches covered about 1.5 ha around it. Settlements of this kind often spread over several hectares, so its northern edge may reach the ditch on 5a's southern boundary. That is a possibility, not a recorded fact.
- **Still active.** The museum asked for conservation money in 2026 and applied to a fund for sites threatened by ploughing, so excavation there may continue.
- **The medieval finds.** They were handed in through the local museum, so someone has already detected on your land north-west of the road. Who made them is not on the public record.

Areas of interest

The southern edge of 5a ranks first because it is the nearest ground to an excavated Viking settlement. Numbers match the map.

Rank	Area	Why	How to search
1	Southern edge of 5a, a band about 45 m deep, from the farmyard east to the corner	About 100 m from the Viking longhouses and hoard; the settlement may run up to the old ditch	Tight lanes parallel to the ditch, all metals, GPS every non-ferrous find
2	The ground around the 2024 medieval finds, north-west of the road	Medieval coins and a belt fitting already found; between the main road and the farm	Grid it in tight lanes; plot finds to see if they cluster

Rank	Area	Why	How to search
3	South-west corner of your land at the village edge	Meets Ting Jellinge village; about 95 m from the church	Lanes along the village boundary
4	The two low rises on 5a	Natural house sites on old maps; the north-east one has a pond beside it	Detect and walk for pottery, burnt stone and slag
5	The old farm track east of the farmyard, and the road frontage	Track on both old maps; '22 km' stone and main road	Lanes along the track line

- **The rest of 5a** should be sampled with wide lanes. A pale soil patch near its east end shows on the aerial photo; walk it if you are there.
- **The meadow strips** in the north of your other parcels are former wet ground and the lowest priority.
- **If area 1 produces Viking or Late Iron Age metalwork**, stop widening the search there and tell the museum before going further.

First 10 hours

Spend the first half on the two areas with recorded finds, and the rest testing the other targets.

1. **Hours 1 to 3: area 1.** Lanes about 1.5 m apart along the southern ditch, starting at the east end, nearest the longhouses, and working west towards the farmyard.
2. **Hours 3 to 5: area 2.** A tight grid around the 2024 findspot north-west of the road.
3. **Hours 5 to 6: area 3.** The village edge in the south-west corner.
4. **Hours 6 to 7: area 4.** The two low rises on 5a.
5. **Hours 7 to 9: sampling.** Wide lanes about 15 m apart across the rest of 5a and the fields north-west of the road.
6. **Hour 10: go back** to whichever spot gave most.

Log every non-ferrous find with a GPS point. On a site like this the find map matters as much as the finds.

What to expect

Medieval and later finds are near certain, and Viking or Late Iron Age material is a real chance on 5a's southern edge. The figures are my judgment from the evidence above, not measured rates.

Period	Chance of a datable find	Typical finds
Post-medieval (after 1536)	Near certain	Skilling coins, buttons, buckles, lead seals
Medieval (about 1050 to 1536)	Near certain north-west of the road; likely elsewhere	Pennies, buckles, belt fittings, strap ends, cooking-pot legs
Viking Age and Late Iron Age	40 to 60% on area 1; lower elsewhere	Hack-silver, Arabic coin fragments, weights, brooches, strap fittings, casting waste
Earlier Iron Age	10 to 20%	Fibulae, slag
Stone Age and Bronze Age	Flint possible	Worked flint; bronze rare

Settlement or casual loss? Casual losses and manuring give a thin, even scatter. A settlement gives a tight cluster of mixed household metal: several brooches, weights, spindle whorls, casting waste, knife fragments and slag, often with dark soil and burnt stone. Silver fragments or Arabic coins anywhere near area 1 may belong to the scattered hoard: record them exactly and report them straight away.

Rules and reporting

Nothing on or beside your land is protected, but this permission sits next to an active museum site, so report early and in detail.

- **Permission.** Keep the landowner's agreement current and confirm in writing which parcels it covers.
- **The Viking site.** Matrikel 4b and 4c belong to Bakkegård, not to your permission. Do not detect there. Consider telling Museum Sydøstdanmark before you start on 5a; they will want to know about Viking finds so close to their site.

- **Danefæ.** Finds that qualify as danefæ belong to the state and must be handed in through Museum Sydøstdanmark. Silver, gold and coins of this age almost always qualify.
- **Recording.** Register finds in DIME with a GPS point and the matrikel number.
- **Depth.** Stay in the plough layer. If you meet several silver pieces together, burnt bone, dark pits or a concentration of finds, stop digging, mark the spot and call the museum. That is how the 2025 excavation began.

Limits and open questions

This is a desk assessment from the heritage register, the two survey maps, your screenshots and a few public sources; nothing has been checked on the ground.

- **Parcel outlines** are traced from your app screenshot and fitted to field boundaries on the register's map. They are good to about 10 to 20 m.
- **Record positions** are the register's coordinates. The Viking site's point marks the excavation, not the full extent of the settlement.
- **Period chances are judgments.** The 40 to 60% figure for Viking material on area 1 assumes the settlement continues north towards 5a, which has not been shown.

Open questions:

- ☐ Confirm which parcels the lighter-orange area in your app covers, and that they are in the permission.
- ☐ Find out who made the 2024 medieval finds on your land, and whether they still detect there.
- ☐ Ask Museum Sydøstdanmark how far north the Viking settlement is thought to run, and whether they plan more work near 5a.
- ☐ Ask the landowner when the fields are free to search, and whether anything has turned up in ploughing.
- ☐ Check the earliest cadastral map (about 1800 to 1820) for the village and where Bilsebjerg Gård stood before it moved out.
