Genner Bygade 5 detecting permission report

Nov 7, 2026 · @Mark

Summary

The permission is the farm at Genner Bygade 5: one parcel, matrikel 153 of Genner, Ø. Løgum, about 3.2 ha, with a farmhouse built in 1827. It is a classic enclosure strip: a narrow field about 100 to 125 m wide that runs 330 m south-south-east from the farmhouse on the street to a damp hollow. It sits in the old core of Genner village on the north side of Løjt Land, a few hundred metres from Genner Bugt. The village was part of Øster Løgum parish until Genner got its own church in 1935, and it was German from 1864 to 1920. This is a village-core permission, so expect a dense run of 1700s to 1900s losses, with Danish, Schleswig-Holstein and German coins all possible.

- **Start on the street frontage and round the farmhouse (area 1).** A farm of 1827 on the village street, with the village hall next door, will have two centuries of losses round it.
- **Then the field just behind the yard (area 2).** Household rubbish and ash were spread on the nearest ground, and the school and dairy were a few minutes' walk away.
- **Then the east edge (area 3) and the south end (area 4).** The east edge runs beside the hall and sports ground, probably on an old boundary. The south end drops to a damp hollow about 280 m from where a silver thaler of 1636 was dug up.
- **No protected monuments lie on the parcel.** The nearest record is the 1920 reunification stone about 100 m from the street end. The nearest prehistoric site is a protected mound 520 m north-east of the house. A cemetery of long barrows and round barrows starts about 450 m east of the parcel, beside a lost medieval pilgrim chapel to St Jacob.
- **To settle first:** whether the field is ploughed this season, where you may search round the house and yard, and whether the small plot inside the north-east corner is the owner's too.

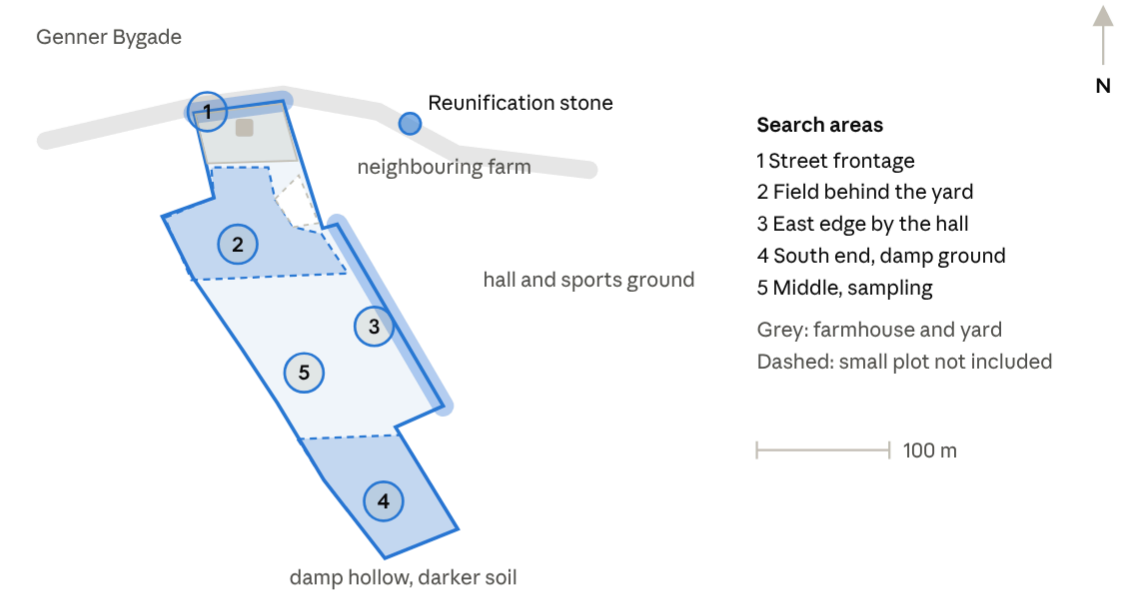

The parcel outline is traced from your hunting-app screenshot and is good to about 10 m. Positions from the archaeology register are good to about 10 to 50 m, and my reading of the 1901-71 map to about 25 to 50 m.

Map

Numbers run from the first place to search (1) to the last (5); the reasons are in Areas and plan below. The outline is traced from your hunting-app screenshot.

Start at the street end; the strip runs 330 m south to damp ground

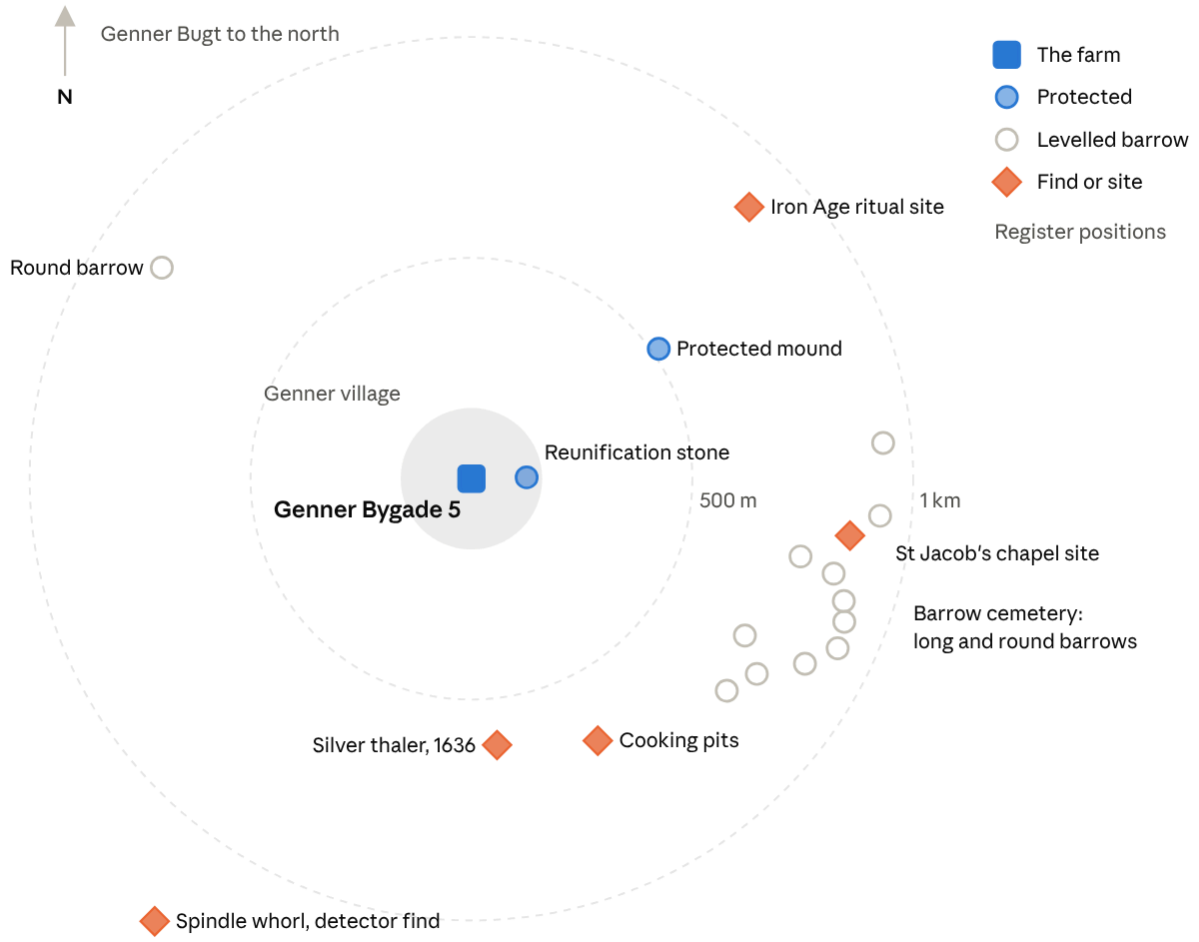

Matrikel 153 traced from your hunting-app screenshot, good to about 10 m; north is up

Matrikel 153 with the five search areas

Genner sits on the western edge of a barrow landscape

Recorded sites within about 1 km of Genner Bygade 5; north is up

Recorded sites round Genner Bygade 5, from the archaeology register

The barrows, stone ring, chapel site and ship-settings all lie east of the village. The nearest finds to the farm are the thaler in a garden and the cooking pits, about 600 m south.

Parcel	Size	Where	Today
153, Genner, Ø. Løgum	about 3.2 ha (32,266 m²)	A strip about 100 to 125 m wide running 330 m south-south-east from Genner Bygade; a small separate plot sits inside its north-east corner	Farmhouse of 1827 and yard at the street end; the rest a single arable field with tramlines on the photo, darker soil at the south tip

- **Address:** Genner Bygade 5, 6230 Rødekro (Genner). Ejerlav Genner, Ø. Løgum; Genner parish, Aabenraa Kommune.
- **Height:** about 50 m above sea level at the house.

History of the area

Genner is an old farming village on the north side of Løjt Land, between Genner Bugt and the road from Aabenraa to Haderslev. The farm stands on the village street, in the middle of its old core.

- **The farm.** The address register gives matrikel 153 of Genner, Ø. Løgum, about 3.2 ha, with a brick farmhouse built in 1827 and extended in 2003 (DanskAdresseAPI). A farmhouse of 1827 on the village street means the plot has been lived on and worked for at least two hundred years, and probably much longer.
- **Øster Løgum parish.** Until 1935 Genner belonged to Øster Løgum parish, which is why its archaeology records carry Øster Løgum numbers (220304). Genner Kirke on Jonsbjerg, at the north-east edge of the village, was built in 1935 to designs by Jep Fink (Lex).
- **The Thirty Years' War.** Soldiers plundered Øster Løgum parish in the late 1620s and took the church's chalice. In 1630 a Genner farmer, Jens Madsen, gave the church a new silver one. The silver thaler of 1636 found in a Genner garden comes from these same troubled decades, when people hid and lost coin.
- **St Jacob's chapel.** A pilgrim chapel to St Jacob (St James) stood by the road between Genner and Kalvø, about 870 m east of the farm. It is marked on Johannes Mejer's map of 1648 and was abandoned soon after the Reformation. Monk bricks were found there in 1921, and big foundation stones were removed in 2000 when a slurry tank was built.
- **German 1864 to 1920.** After the war of 1864 Genner was part of Prussia and then the German Empire, until the 1920 vote returned North Schleswig to Denmark. The reunification stone by the village hall, unveiled on 15 June 1936, was brought from a wood at Genner Strand.
- **The older landscape.** East of the village lies a cemetery of long barrows and round barrows, with a ring of big stones 15 to 20 m across found by ploughing in 1971. Field names on Peter Kier's atlas of about 1815 ("Nørre Snekkell", "Trettensten") record lost Viking ship-settings 1.3 km east.

What the old maps show

The 1901-71 map puts the farm in the middle of a busy village with its own hall, school and dairy. These readings come from your Fund og Fortidsminder screenshot. The 1842-99 series shows nothing here, probably because Genner was German from 1864 to 1920, so this is the oldest map available in that viewer.

1901-71 map (lave målebordsblade)

- **The farm.** The marker sits on a cluster of buildings on the south side of the village street, with a hatched building just behind it to the south. The farm was already a working holding on the street around 1900.
- **Village hall next door.** "Forsamlingshus" is printed immediately east of the farm. That is where the reunification stone now stands. Village halls were busy meeting places from the 1880s on.
- **School just south-east.** "Skole" is printed across the field south-east of the farm, reached by a track off the street.
- **Co-operative dairy to the west.** "Mejeri" is printed on the street a little west of the farm. Farmers brought milk here every day by cart.
- **Long strip fields.** Straight parallel boundaries run south-south-east from the backs of the village plots. They are typical of the enclosure (udskiftning) of the village fields around 1800, when each farm got a long strip running back from its house.
- **A field track.** A dashed track runs south-south-east from the street past the school, between the strips.
- **Wet ground to the south.** Meadow and bog symbols, a small pond and a stream lie about 250 to 300 m south, where the ground falls to about 42 m (the house stands at about 50 m).
- **A main road to the east.** A road on the east edge carries a "9 km" distance marker.

If the parcel is the farm's strip running back from the house, it will cross the line of old boundaries and the dashed track, and run down towards the wet ground.

Recorded archaeology

Nothing is recorded on the parcel. The nearest records are the reunification stone about 100 m from its street end, the 1636 thaler about 280 m beyond its south tip and the cooking pits about 320 m south-east of it. The register holds about 20 sites within 1 km and some 50 within 1.5 km, most of them barrows east of the village. Distances are from the farmhouse.

Record	What it is	Date given	Distance
220304-400	Protected reunification stone by the village hall, unveiled 1936	1920	125 m east
220304-172	Protected mound or bank, 2.6 m high and 20 to 27 m across, with kerb stones	Prehistoric	520 m north-east

Record	What it is	Date given	Distance
220304-252	Nuremberg silver thaler of Ferdinand II, 1636, dug up with potatoes in a garden at Bygaden 65 in 1983; danefæ	1536 to 1660	600 m south
220304-383	Three cooking pits, a flint scraper and a potsherd from a sewer trench along Haderslevvej, 2015	3950 to 501 BC	660 m south-south-east
220304-398	Row of fence posts linked to a prehistoric settlement dug across the road	Prehistoric	670 m south-east
220304-175, -173, -177, -176	Four long barrows, now levelled	Stone Age and prehistoric	710 to 900 m east and south-east
220304-232	Ring of large stones, about 1 m high and 15 to 20 m across, hit by the plough in 1971	Prehistoric	770 m east
220304-178	Site of St Jacob's pilgrim chapel; monk bricks seen 1921, foundation stones removed 2000	Medieval, 1200 to 1540	870 m east
220304-238	Three or four patches of black and grey pottery found draining the meadow in 1968, recorded as a ritual site	Iron Age	880 m north-east
About 15 records from 220304-174 onwards	Round barrows, most of them ploughed out	Prehistoric	780 m to 1.1 km east
220304-164	Protected barrow	Stone Age	1.2 km north
220304-160	Protected barrow	Prehistoric	1.2 km west
220304-409	Spindle whorl found with a detector on a field west of Genner, 2022	Medieval, 1067 to 1299	1.2 km south-west
220304-217	Protected stone cairn	Prehistoric	1.3 km north-west

Record	What it is	Date given	Distance
220304-184C and -184B	Lost ship-settings, known only from the field names "Nørre Snekkell" and "Trettensten" on a map of about 1815	Late Iron Age and Viking	1.35 km east

- **A barrow landscape to the east.** Long barrows, round barrows, a stone ring and ship-settings line the ground east of the village towards Kalvø. The farm lies on the western edge of it.
- **A settlement south-east.** Cooking pits and a post row along Haderslevvej show a prehistoric farm about 650 m away.
- **Few detector records.** Only one detector find (the spindle whorl) is registered within 1.5 km, so this ground has seen little recorded detecting.

Areas and plan

The street end ranks first, because that is where people lived, worked and dropped things for two centuries or more. Numbers match the parcel plan in Map.

Rank	Area	Why	How to search
1	The street frontage, about 70 m along Genner Bygade, and the ground round the house and yard	Farmhouse of 1827 on the old village street; the village hall next door; gates and the farm entrance	Tight lanes along the street side and round the buildings, where the owner allows; dig all non-ferrous
2	The field just behind the yard, the first 80 to 100 m of the strip	Ash and kitchen rubbish spread on the nearest field; the school and dairy close by on the 1901-71 map	Lanes across the strip, working south until finds thin out
3	The east edge, about 160 m along the hall and sports ground	Probably an old strip boundary; a field track ran south past the school on the 1901-71 map	One or two lanes along the edge
4	The south end and the damp hollow	Wet ground was used for deposits in prehistory; the thaler and the cooking pits are 280 and 320 m beyond	Wide lanes first; look for dark patches, burnt flint and pottery

Rank	Area	Why	How to search
5	The middle of the strip	Thin manuring scatter	Wide lanes about 10 m apart, then tighten where it produces

- **The small plot** inside the north-east corner is a separate parcel. Leave it unless the owner says it is theirs too.
- **The farmyard itself** will be full of modern iron. Search it only where the owner wants.

First 10 hours

1. **Hours 1 to 3: area 1.** Tight lanes about 1.5 m apart along the street side and round the yard.
2. **Hours 3 to 5: area 2.** Lanes across the strip behind the yard, working south.
3. **Hours 5 to 6: area 3.** Along the east edge.
4. **Hours 6 to 8: area 4.** Wide lanes over the south end, tightening round anything early.
5. **Hours 8 to 9: area 5.** Wide lanes across the middle to see where finds thin out.
6. **Hour 10: go back** to the best spot and tighten the lanes.

Log every non-ferrous find with a GPS point, including buttons and scrap. In a village core the pattern often shows where old buildings and paths were.

What to expect

Post-medieval finds are near certain, and the mix of coinage is unusual because the village changed hands twice. The figures are my judgment from the evidence above, not measured rates.

Period	Chance of a datable find	Typical finds
1864 to 1920 (German)	Near certain	Pfennig and mark coins of the German Empire, Prussian coins, uniform and civilian buttons, harness fittings
1700s to 1864	Near certain	Danish and Schleswig-Holstein skilling and schilling coins, buttons, buckles, thimbles, lead seals, clay pipe
1536 to 1700	Likely	Skillings of Christian IV, Lübeck and Hamburg coins, a thaler like the 1636 find, cloth seals, shoe buckles

Period	Chance of a datable find	Typical finds
Medieval (about 1050 to 1536)	Possible	Pennies, spindle whorls like the 2022 find, buckles, pilgrim badges on the road to St Jacob's chapel
Viking and Iron Age	5 to 10%	Brooch fragments, pottery; ship-settings and a ritual site lie 0.9 to 1.4 km away
Bronze Age	5 to 10%	Bronze fragments near barrows
Stone Age	Surface flint likely; metal none	Flint flakes, scrapers, axe fragments

- **Three currencies.** Danish, Schleswig-Holstein and German coins can all turn up together. A German pfennig is as much part of this village's story as a Danish skilling.
- **War losses.** The 1620s to 1640s and the wars of 1848 to 1850 and 1864 all passed through Schleswig. Hidden or lost coin from those years is possible.
- **Village junk.** Expect a thick scatter of modern iron, foil and scrap close to the buildings.

Rules, limits and open questions

Rules

- **Permission.** Keep the owner's agreement current, and check it covers all of matrikel 153.
- **Protected monuments.** Detecting is not allowed on a protected monument or within 2 m of it. None is known on the parcel; the nearest is the reunification stone 125 m east.
- **Danefæ and recording.** Register finds in DIME with a GPS point and the matrikel number. The responsible museum is Museum Sønderjylland.
- **Depth.** Stay in the plough layer. If you meet dark soil, burnt stone, pottery or wall foundations, stop and tell the museum.
- **Near the house.** Agree with the owner where you may search round the buildings, gardens and any drains or cables.
- **Ammunition.** Leave anything suspicious and call 114. Military items from 1864 and both world wars turn up in Sønderjylland.

Limits

- **The parcel outline is traced.** I traced it from your hunting-app screenshot, scaled to the registered area of 32,266 m². Corners may be about 10 m out.
- **Only one old map.** The 1842-99 series shows nothing for Genner, so only the 1901-71 map is read. Old-map readings are good to about 25 to 50 m.
- **Trap Danmark** would not load, so the village history here relies on the archaeology register and short sources.
- **Record positions are the register's coordinates.** Records from 1920 and earlier, and the ship-settings known only from field names, can be well out.

Open questions

- [ ] Ask the owner whether the small plot inside the north-east corner is theirs and may be searched.
- [ ] Look for an older map of Genner, such as Peter Kier's atlas of about 1815 or a Prussian survey sheet of about 1878.
- [ ] Ask the owner whether the field is ploughed this season, and where you may search near the house and yard.
- [ ] Ask the owner what the farm was before 1827, and whether old buildings stood elsewhere on the plot.
- [ ] Check Peter Kier's atlas of Øster Løgum parish (about 1815) for the farm and its fields.
